TYPE AH FILTER RETAINER

For Flat or "V" Bank Arrangements

AIRSAN TYPE AH FILTER RETAINER

Airsan Type AH filter retainers are designed for flat or "V" bank arrangements. They can be easily built up to any height or width necessary by the progressive addition of retainers. The standard AH retainer is made of sturdy 16 gauge galvanized steel. Spot welded corner gussets insure retainer rigidity and meet heavy-duty requirements. Felt gasketing around the inside perimeter of the retainer prevents the bypass of unfiltered air. Two positive retaining clips secure the filter in position.

Standard retainers are available in either a 2" or 4" nominal thickness. The 2" retainer can be adapted to hold a 1" thick filter if a special Z-111S clip is specified.

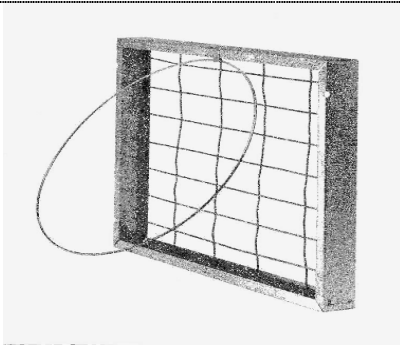

Retainers are also available in other materials such as: stainless steel, aluminum or bronze. Airsan type AHS Stainless Steel retainers made of 20 gauge, type 304 stainless steel are available in standard 2" sizes. Quotations may be requested for other stainless steel gauge thicknesses and material grade classification.

See chart below for a listing of standard size retainers. Non-standard sizes can also be made for special requirements.

Disposable Media Retaining Frames

DM disposable media retainers are designed for safe, low cost use. There are no exposed wire ends. A 24 gauge galvanized steel frame highlights the durability of this media retainer.

Oil Wetted Panel Filters

Oil wetted panel filters are available for low and high velocity applications on heating, cooling, and ventilating equipment. These filters have an all metal construction and are available in galvanized steel, aluminum, stainless steel, monel or bronze.

Dry Type Panel Filters

Dry type panel filters are permanent, cleanable; and designed for engines, compressors, and industrial applications. The polyester media can be cleaned and the filter placed back onto service without applying recharging adhesive.
