TYPE KK AIR FILTERS

PERMANENT • DRY TYPE • POLYESTER MEDIA

**For Electronic and Electrical Cabinet Ventilation
and Air Moving Systems.**

AIRSAN TYPE KK Air Filters Permanent • Dry Type • Polyester Media

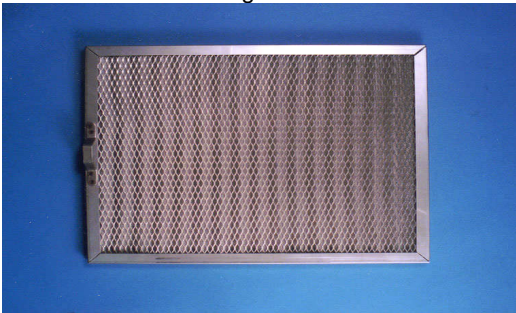

Airsan Type KK filters are highly efficient permanent air filters designed to protect ventilated equipment.

These filters offer low initial resistance, large dust holding capacity and are easily cleanable with warm water and detergent. Because they are used dry, no adhesive is required. They are not affected by changes in temperature or climatic conditions.

These filters are constructed of polyester media sandwiched between two pieces of screen cloth in a sturdy metal frame, with expanded metal on both faces to protect the media.

Type KK filters can be manufactured in any rectangular size required in thicknesses of ¼", ½", ¾", 7/8", 1" and 1 7/8". Custom designed filters can be provided to meet your specific requirements.

Type KK filters' pleated configuration maximizes use of the open area. The custom KK filters' CFM capacity can be increased by adding pleats. These additional pleats result in a lower initial resistance and lengthen the service interval.

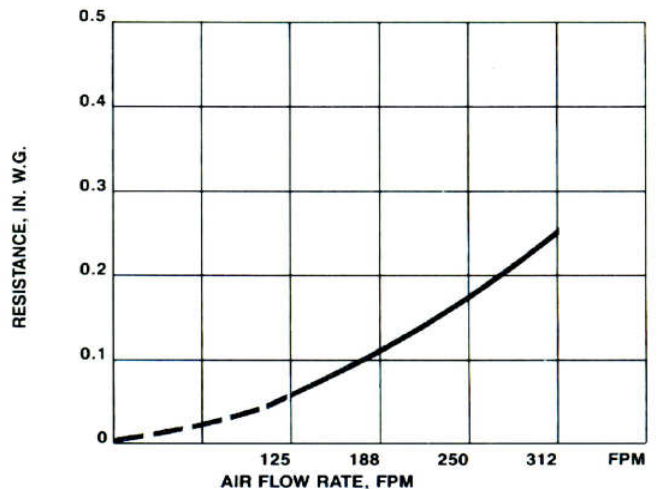

Type KK filters are available in Aluminum (KKAA), Stainless Steel (KKSS), Bronze (KKBB), Monel (KKMM) and Galvanized Steel (KK). Aluminum type KKAA may be plated to specifications when required.

Airsan type KK filters are ideally suited to the small quantity air filter user.

Type KK filters are readily interchangeable with presently installed disposable filters. These permanent filters can be serviced, generally in less time than ordering, receiving, stocking and replacing disposable filters.
